

River Place

Greenville SC

The largest single development project in the history of downtown Greenville, SC, River Place is all about connectivity. This \$65 million dollar mixed-use project is a unifying element that connects and energizes public and private spaces along the banks of the Reedy River. SDI's professional surveying and civil engineering design services are integral to the experience of "place" that rewards residents and visitors alike.

River Place tightly weaves office, retail, hotel, restaurants and residential condominiums with public plazas, walkways, and parking on a five acre riverbank site. SDI surveyors laid the groundwork for connectivity at River Place, providing the boundary survey and the summary plat for subdivisions of the project's various mixed uses. SDI civil engineers coordinated with utility companies for service lines and submitted timely permit packages to develop infrastructure on this complex site. The public/private investment aspect of the project presented inherent challenges from the engineering design stage through construction administration. Today, River Place is a feather in our cap. We are proud of the body of work accomplished for this pivotal project in our hometown.
